Deloitte Australia - Technology Job
Simulation
Software Development with Amazon
Q Developer
JavaScript(Intermediate)

Karthik Kolamuri

Full Stack Developer | Intern @ Aadi Foundation | Open-Source Contributor | National Hackathon Winner (MSME) | Exploring AI + Web Development

Tadepalligudem, Andhra Pradesh, India

Summary

Currently pursuing a Bachelor of Technology in Computer Science at Sasi Institute of Technology & Engineering, with a strong focus on backend engineering, scalable APIs, and server-side optimization. Completed an internship at Aadi Foundation, where I designed high-performance RESTful APIs, implemented secure authentication workflows, and optimized middleware for faster, more reliable systems.

Technical strengths include Node.js, Express.js, MongoDB, and API testing with Postman, complemented by frontend development skills in React and Tailwind for building responsive UIs. Proficient in debugging, error handling, and performance tuning to deliver resilient and maintainable software.

Recognized as a National Hackathon Winner with a #7 Lakh grant, showcasing problem-solving ability and innovation in real-world scenarios. Driven to apply full-stack expertise to develop impactful, secure, and scalable solutions that push both technology and organizational goals forward.

Experience

Vyntyra Consultancy Services

Back End Developer Intern

September 2025 - Present (2 months)

Remote

I played a key role in developing backend solutions at Vyntyra Consultancy Services, focusing on server-side logic and database management.

- Wrote well-documented code in Python, Node.js, Java, and SQL/NoSQL, enhancing system performance.

- Identified and resolved bugs in backend systems, ensuring smooth functionality.
- Continuously learned new frameworks and cloud technologies to improve backend performance.

Aadi foundation

Web Developement Intern

January 2025 - March 2025 (3 months)

remote

Architected and deployed high-performance RESTful APIs using Node.js and Express, enabling 40% faster data flow between services and reducing latency by 25%, directly improving app responsiveness.

Engineered a secure, scalable user authentication system with bcrypt and express-session, ensuring encrypted credential handling and zero downtime, while supporting over 1,000 mock user sessions in load tests.

Led collaborative development cycles using Git and GitHub, managing 10+ feature branches, enforcing PR standards, and resolving critical merge conflicts to maintain CI/CD pipeline stability.

Optimized API performance through middleware streamlining, asynchronous request handling, and connection pooling, resulting in a 30% reduction in server response times under load testing.

Implemented custom error handling and logging middleware, ensuring clean, traceable API failure reports and reducing bug resolution time by 50%.

Education

Sasi Institute of Technology & Engineering

Bachelor of Technology - BTech, Computer Science · (April 2026)
