Hiring Team
Atlan

Subject: Application for Senior Engineering Manager
Dear Hiring Team,

I am excited to apply for the Backend Engineering Internship at Atlan. As a Computer Science undergraduate with over two years of backend and full stack development experience, I have built scalable systems, optimized API performance, and developed secure data-driven platforms – experiences that align closely with Atlan's mission of transforming data chaos into clarity.

At Aadi Foundation, I engineered RESTful APIs with Node.js and Express that reduced request latency by 25% and refactored middleware to cut response times by 30%. For my MSME Hackathon-winning healthcare project (₹7 Lakh grant), I built a telemedicine platform leveraging Stream Chat/Video APIs, role-based access control, and encrypted communication, delivering secure and scalable healthcare solutions. These experiences have honed my ability to design reliable, AI-integrated backend systems – skills I am eager to bring to Atlan.

I am particularly drawn to Atlan's AI-native vision and its work on the Metastore, Metadata Lakehouse, and connectors across the modern data ecosystem. My familiarity with microservices, metadata concepts, Apache Iceberg, Kubernetes, and CI/CD pipelines positions me to quickly contribute to projects involving app frameworks, data pipelines, and cloud-native infrastructure. Just as importantly, I thrive in collaborative environments, having led Git-based workflows and Agile sprints to deliver impactful projects.

Joining Atlan represents more than an internship to me – it is the opportunity to learn from experts, work on next-generation data systems, and contribute to a company shaping how humans and data work together. I am eager to bring my skills in backend engineering, AI-assisted development, and data systems to the team while growing through this unique experience.

Thank you for considering my application. I look forward to the possibility of contributing to Atlan's mission and learning from your world-class engineering team.

Warm regards,
Karthik Kolamuri
